

ARE YOU READY FOR

CHEMOTEQ?

USP <797> and NIOSH-recommended protection of the end-product, the operator, and the environment in the compounding of hazardous drugs is a demanding task. Regardless of the type of facility and engineering controls employed, two, equally-important skill sets that must be mastered by compounding personnel are Aseptic, and Containment techniques. And, because these skills need to be used simultaneously during compounding, they need to be verified simultaneously; not separately, or after-the-fact.

CHEMOTEQ™ is a demanding challenge of Containment/Aseptic technique unparalleled in assuring operator competency in hazardous drug compounding. Following a review of the SAFE COMPOUNDING of HAZARDOUS DRUGS manual by the candidate, a comprehensive, 14-step practical challenge is observed and graded (www.valiteq.com > Product Information Video >Chapter 6. CHEMOTEQ Hazardous Drug Compounding). Successful completion of this practical exercise leads to a qualitative residue-recovery assay of the surrogate end-products and compounding environment. Then, in order to 'close the loop' on hazardous compounding safety, the sterility-released surrogate pharmacy end-products are delivered to administering Nursing personnel for an additional challenge of their Containment/Aseptic administration technique.

This additional verification includes normal staging and starting of the admixture and end-products, leading to collection of a final surrogate end-product representing the infusion through the patient's catheter. A successful residue-recovery procedure and sterility-release of this end-product may then represent an institutional continuum of hazardous drug Containment/Aseptic technique competency throughout the compounding, transport, and administration, or proper disposal of these drugs. ACPE Continuing Education Credit of 0.4 CEU is available for successful completion of the CHEMOTEQ Containment/Aseptic Technique Verification System by prior arrangement with Lab Safety Corporation.

If you're ready, the CHEMOTEQ Containment/Aseptic Technique Verification System is available in 2-test kits, and the SAFE COMPOUNDING of HAZARDOUS DRUGS manual is available in 3 per pkg, online at www.valiteq.com, or by calling Lab Safety, toll-free, at 800-433-7698 ... if you can't make CHEMOTEQ, you shouldn't make CHEMO.
